

std::false_type

std::conditional::type

kiwi::Disjunction< T, TList... >

```
graph BT; A[kiwi::Disjunction< T, TList... >] --> B[std::false_type]; A --> C[std::conditional::type];
```

The diagram illustrates a relationship where a base type, `kiwi::Disjunction< T, TList... >`, is specialized into two different types: `std::false_type` and `std::conditional::type`. Arrows point from the base type box to each of the two specialized type boxes.
